Hiring at FlatIron Health

Hello!

I am very excited to be applying to FlatIron Health. I think that your mission to provide a network of data and people to improve research and data pipeline for oncology is powerful.

I feel that I resonate well with the Software Engineering Intern role. I am interested in working in a fast paced high tech industry, I love solving problems and always looking to develop my craft (software development). My course work has provided me a strong knowledge base. I have taken Object Oriented Programming in Java, Programming in C, Statistics in R, Data Structures and Algorithms and Numerical Analysis in Matlab. These courses have allowed me to teach myself python and Java script.

I think I really flourish working on side projects. Over the past two years I have worked on a bunch of different projects including: a Chrome application that provided a start up with a lightweight event based audio recorder in browser, a full stack web app that allowed everyone to be their own DJ, a markov assumption language model,and currently I am working on a feature-full chess application. The full extent of my software projects can be found on my github!

I look forward to hearing from you, and do not hesitate contacting me if you have any questions.

Thanks in advance!

Zachary Lederman
